Subject: Raised bed planter gardens

Good afternoon David,

I am writing you to let you know how pleased my wife and I are with your product. We are expecting our first child in a few short weeks and had decided many months ago to grow our own vegetables and use them for our baby's food. I built two 5' wide x 20' long raised bed planters in our yard because our soil is too rocky and dense for a good garden. I mixed GroPro in with the fresh topsoil as I filled them. We got a late start and still did not have the beds ready until a week after mother's day and I was beginning to worry that we would not get enough out of the gardens this year to make the baby's food.

I am happy to report that the gardens are doing much better than we could have hoped. The squash and corn are taking over! The GroPro has kept everything looking vibrant and growing faster than most of our friends gardens. We had beans to harvest within 5 weeks and it looks like we will have so many veggies leftover that much of them will need to be canned and frozen for the winter.

It was very important for us not to include any harsh chemical fertilizers in the soil that would nourish our son and GroPro has come through for us with flying colors! We will be feeding the garden all summer with your products and will surely come back for more next growing season. Thanks for giving us a natural way to keep the veggies healthy and fast-growing.

Eric
